

CrewCom Communication System: Site Wide Coverage

Connect Up to 14 Antenna Units for a total of 84 Belt Packs in each separate Radio Zone

The CrewCom system gives you the ability to establish a site wide antennae system using Cat 5, single mode and multi-mode fiber. By allowing up to 84 belt packs and 14 antennae to be deployed in each radio zone this system exceeds the capabilities of any wireless intercom belt pack system delivered to our industry. For example you can have 84 belt packs in the RX Bldg. and another 84 belt packs on the Turbine Bldg. because these are separate Radio Zones. The entire system is connected to a matrix which allows you to connect to your phone system and Motorola hand held radio system, as well as your network to facilitate the use of Key panel hardware and software in strategic locations.
